

Hospital Management System

Introduction

Our Project offers an end-to-end solution for patients, doctors, and pharmacies by integrating the following features:

Online Appointment Booking:

Patients can schedule consultations with doctors at their convenience.

Home Diagnostic Sample Collection:

Patients can book diagnostic tests online, and trained professionals will collect samples directly from their homes.

Online Test Reports:

Doctors can access diagnostic reports instantly through the platform, enabling faster and more informed medical decisions.

Digital Prescriptions:

Based on the test results, doctors can provide prescriptions directly online.

Online Medicine Booking and Delivery:

Patients can order prescribed medicines through the system, which will be delivered to their doorstep.

Doctor -Patient Communication:

Patients can communicate with the trained professionals through the website .

Insurance:

claiming Insurance process will be easier and faster.

Expenditure & Billing:

The billing process would be easier as everything is online the patient can directly pay after taking the services.

Survey of Existing websites

Survey I:

Website: www.mayoclinic.org

Key Features:

- .. **User-Centric Design:** The website offers a clean and modern interface, ensuring ease of navigation for users seeking medical information.
- .. **Comprehensive Medical Resources:** Provides detailed information on diseases, conditions, and treatments, serving as a reliable resource for patients and healthcare professionals.
- .. **Appointment Scheduling:** Integrated system allowing patients to book appointments with specialists across various departments.
- .. **Patient Portal Access:** Secure access for patients to view test results, medical records, and communicate with their healthcare providers.
- .. **Mobile Responsiveness:** Optimized for various devices, ensuring accessibility and a seamless experience on smartphones and tablets.

Awards & Recognition:

- .. Consistently ranked among the top hospital websites for design and functionality.
- .. Praised for its user-friendly interface and comprehensive content.

Survey 2:

Website: : <https://www.hopkinsmedicine.org>

Key Features:

- .. **User-Centric Design:** The website boasts a clean, modern interface that allows users to easily navigate through medical resources and services, ensuring a smooth and efficient user experience.
- .. **Appointment Scheduling:** The website includes a seamless appointment scheduling system, enabling patients to easily book appointments with specialists and clinicians across various departments.
- .. **Patient Portal Access:** Secure, personalized access for patients to view their test results, medical records, and communicate directly with their healthcare providers, enhancing patient engagement and communication.

Potential Disadvantages / Areas for Improvement:

- Complex Navigation for New Users: Certain sections, like insurance or treatment details, may be hard to find for first-time users.
- Overwhelming Information: The abundance of detailed medical content can be challenging for users seeking quick, simplified information.
- Limited Multilingual Support: Expanding language options would enhance accessibility for non-English speaking users globally.
- Appointment Scheduling Issues: The scheduling system can be time-consuming, especially for urgent or same-day appointments.
- Lack of Real-Time Chat Support: Adding live chat would provide immediate assistance and improve user support.

Survey 3:

Website: : <https://www.sunrisehospitals.com/>

.Key Features:

- **.User-Friendly Design:** The website has a clean, straightforward layout, making it easy for users to navigate and find hospital services, doctors, and facilities.
- **.Appointment Scheduling:** Users can schedule appointments directly through the website with specialists and various departments, making it convenient for patients.
- **.Patient Portal Access:** Secure online access for patients to manage their health records, view test results, and communicate with healthcare providers.
- **.Comprehensive Medical Information:** Provides information on various specialties, treatments, and healthcare services available at Sunrise Hospitals, offering a reliable resource for both patients and healthcare professionals.

Potential Disadvantages / Areas for Improvement:

- Limited multilingual support restricts accessibility for diverse users.
- Basic search functionality makes finding specific information harder.
- More detailed patient testimonials could enhance trust and user understanding.
- Inconsistent load times affect browsing experience and need optimization.
- Absence of live chat support limits immediate assistance for appointments or queries.

Technology Stack

Front-end technology :

Java Servlet Pages, html, CSS,
Bootstrap, JavaScript, jQuery
Popper.js

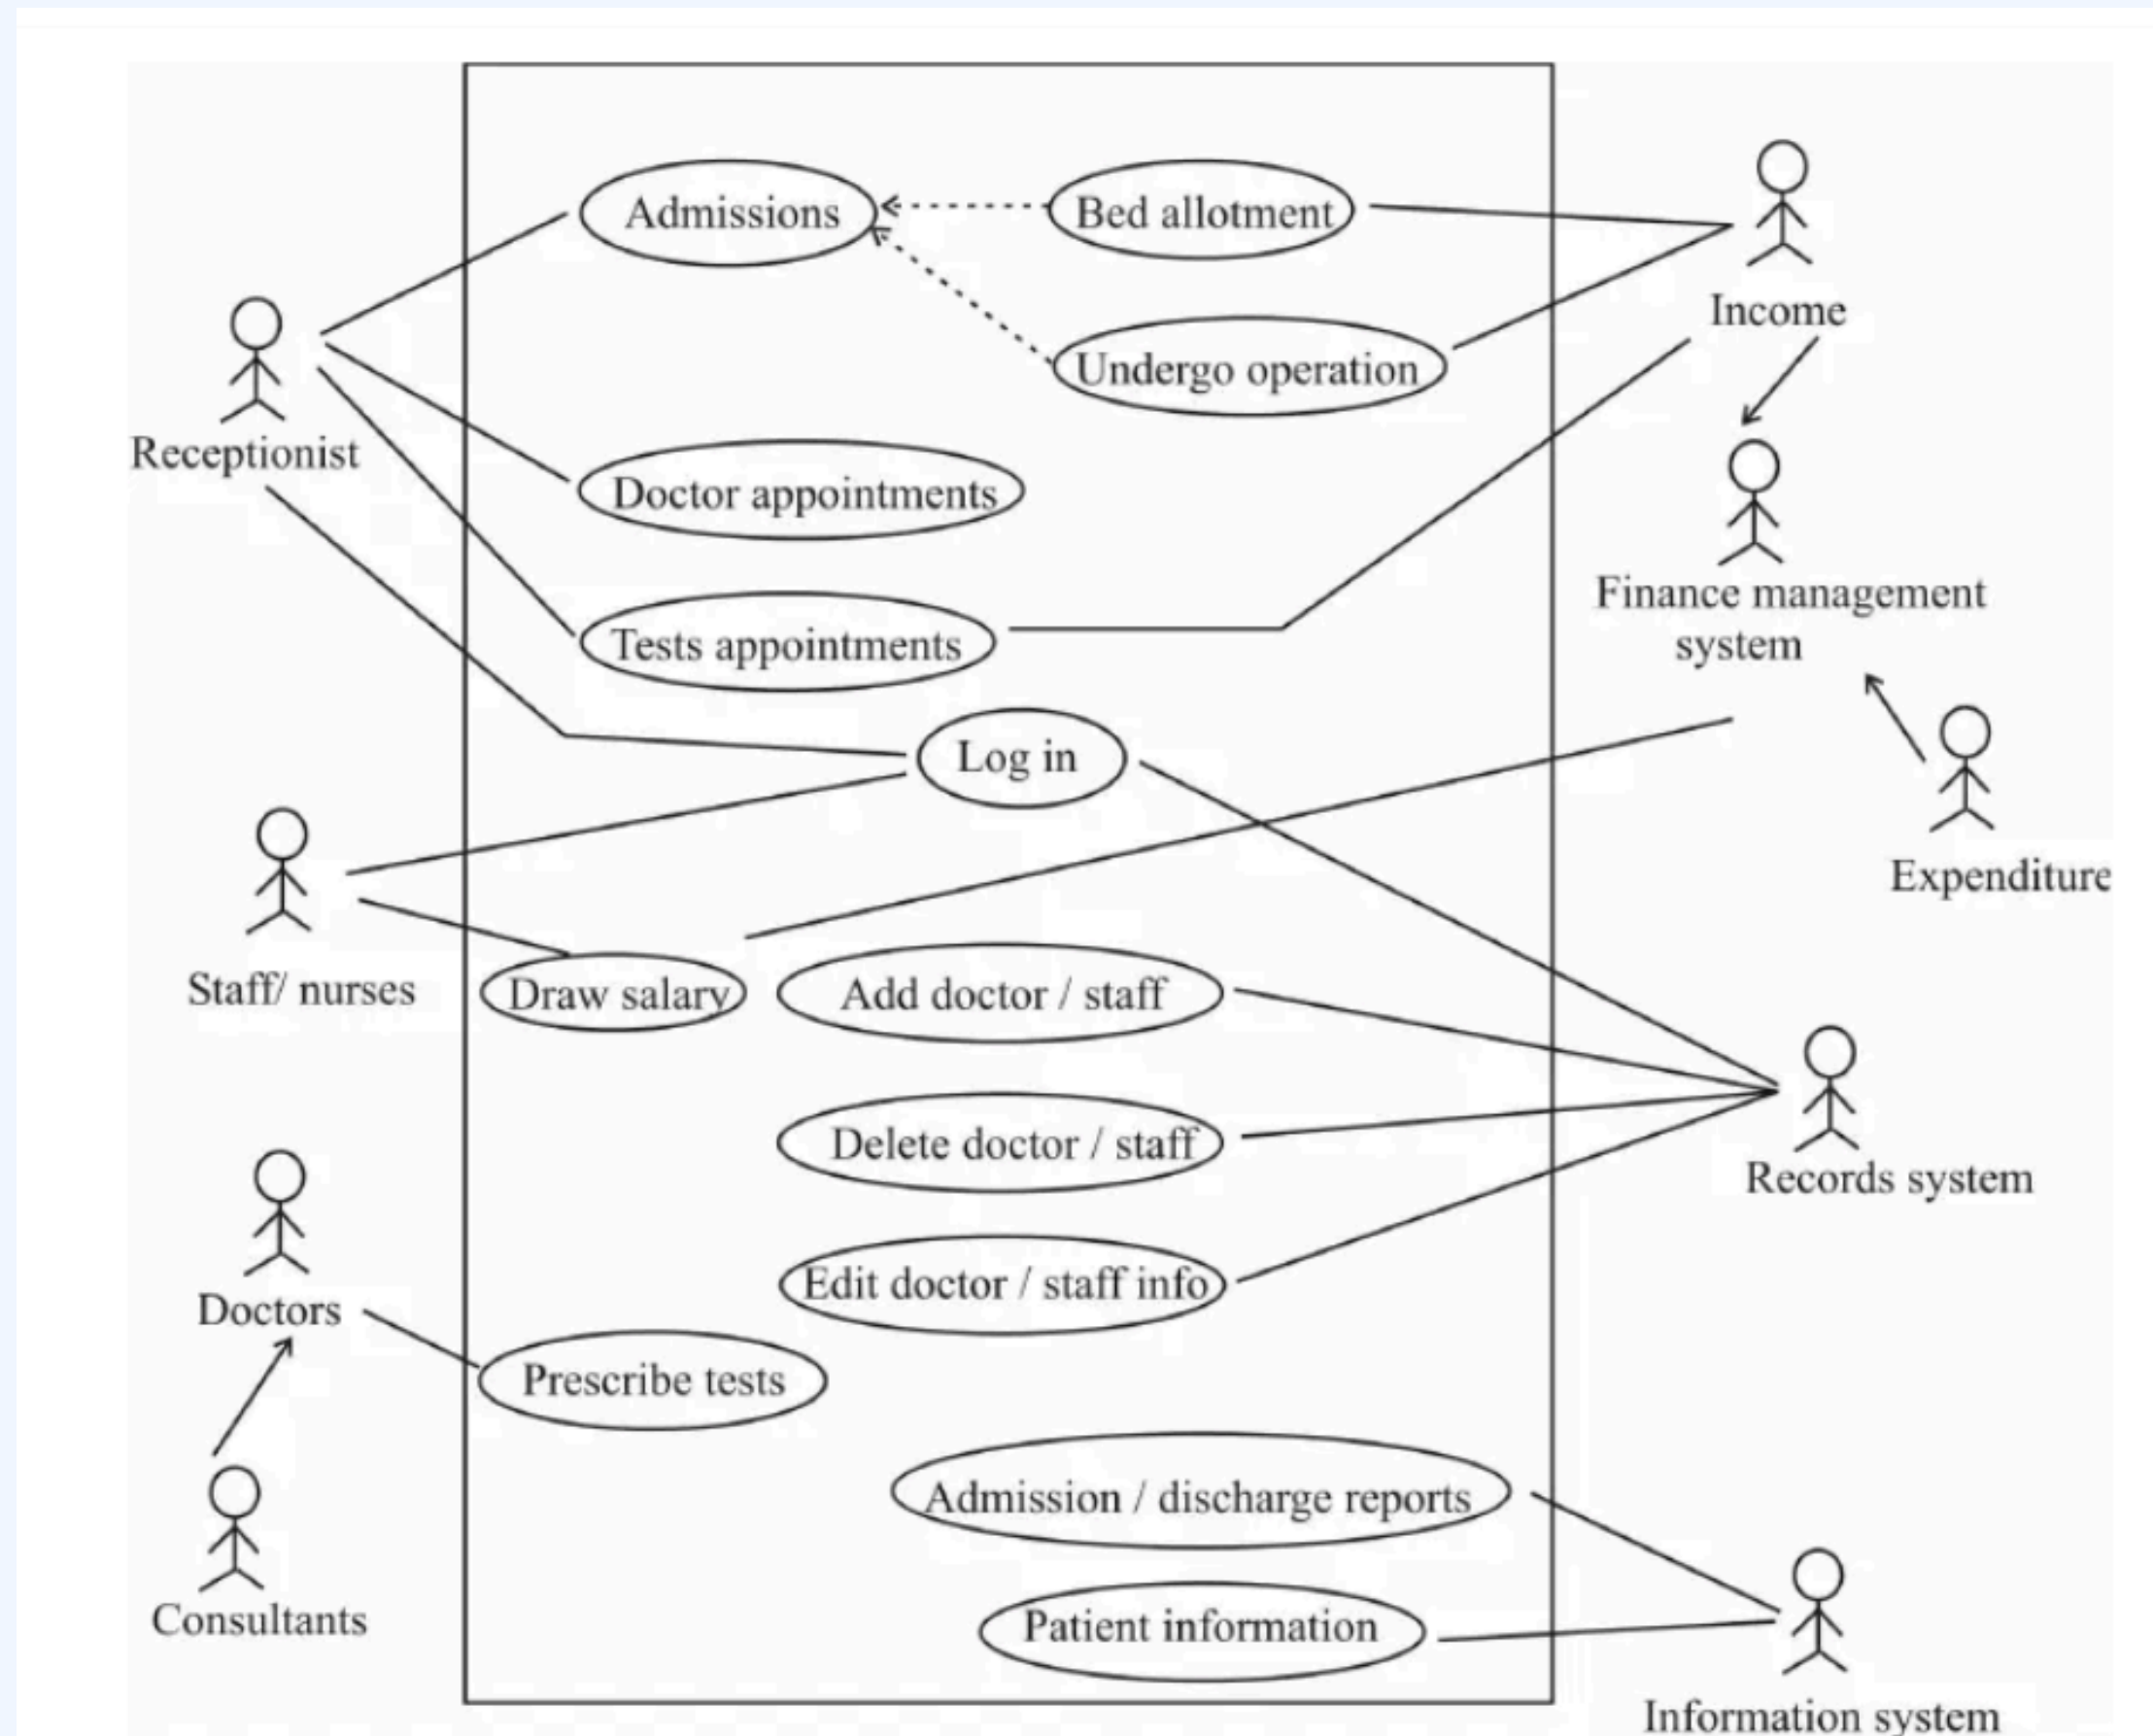

Data base Technology:

Mongo Db

Backend technology :

java

Design and Architecture (MVC)

Features and Functionality

1. Admin Features and Functionality

- User & Role Management: Admin can manage user accounts (patient, doctor, staff), assign roles, and reset passwords.
- Doctor Management: Admin can add/edit/remove doctors, manage schedules, and assign patients.
- Patient Management: Admin can manage patient profiles and medical records.
- Appointment Management: Admin oversees all appointments and reschedules when necessary.
- Billing & Financials: Generate patient bills, track payments, and handle insurance.
- Reports & Analytics: Generate performance reports, patient statistics, and financial reports.
- System Settings: Admin can configure system settings and backup data.

2. Doctor Features and Functionality

- Patient Management: View/edit patient profiles, medical records, and treatment history.
- Appointment Management: View/confirm/reject appointments, reschedule if needed.
- Prescription Management: Write prescriptions, track medications, and access medication databases.
- Consultation & Reports: Record patient consultations and generate treatment reports.
- Communication with Patients: Send appointment reminders, messages, and follow-up notifications.

Features and Functionality

3. User (Patient) Features and Functionality

- Profile Management: Register, update personal details, and track medical history.
- Appointment Booking: Search doctors, book/reschedule appointments, and track status.
- Medical Records: Access test results, consultation history, and prescriptions.
- Billing & Payments: View bills, make payments, and manage insurance.
- Notifications & Reminders: Receive appointment and medication reminders.
- Feedback: Rate doctors and provide hospital service feedback.

Development workflow

1. Setup Development Environment

- Install Eclipse IDE for Java EE development.
- Install MongoDB and set up a local database.
- Add MongoDB Java Driver to the project (via Maven or manual .jar files).

2. Project Structure in Eclipse

- WebContent: Store HTML, CSS, and JSP/Servlets.
- src: Store Java classes (e.g., servlets, data models).
- lib: Store external libraries like MongoDB Java Driver.

3. MongoDB Integration

- Create a utility class for database connection.
- java
- CopyEdit
- ```
MongoDatabase getDatabase() {
 return new MongoClient("localhost", 27017).getDatabase("HospitalDB");
}
```
- Use MongoDB to store and retrieve hospital data (e.g., patient records).

## 4. Create Java Servlets

- Handle client requests (GET/POST) and interact with MongoDB.
- Example: Fetch patient data:
- java
- CopyEdit
- ```
MongoCollection<Document> collection =  
    database.getCollection("patients");  
Document patient = collection.find().first();
```

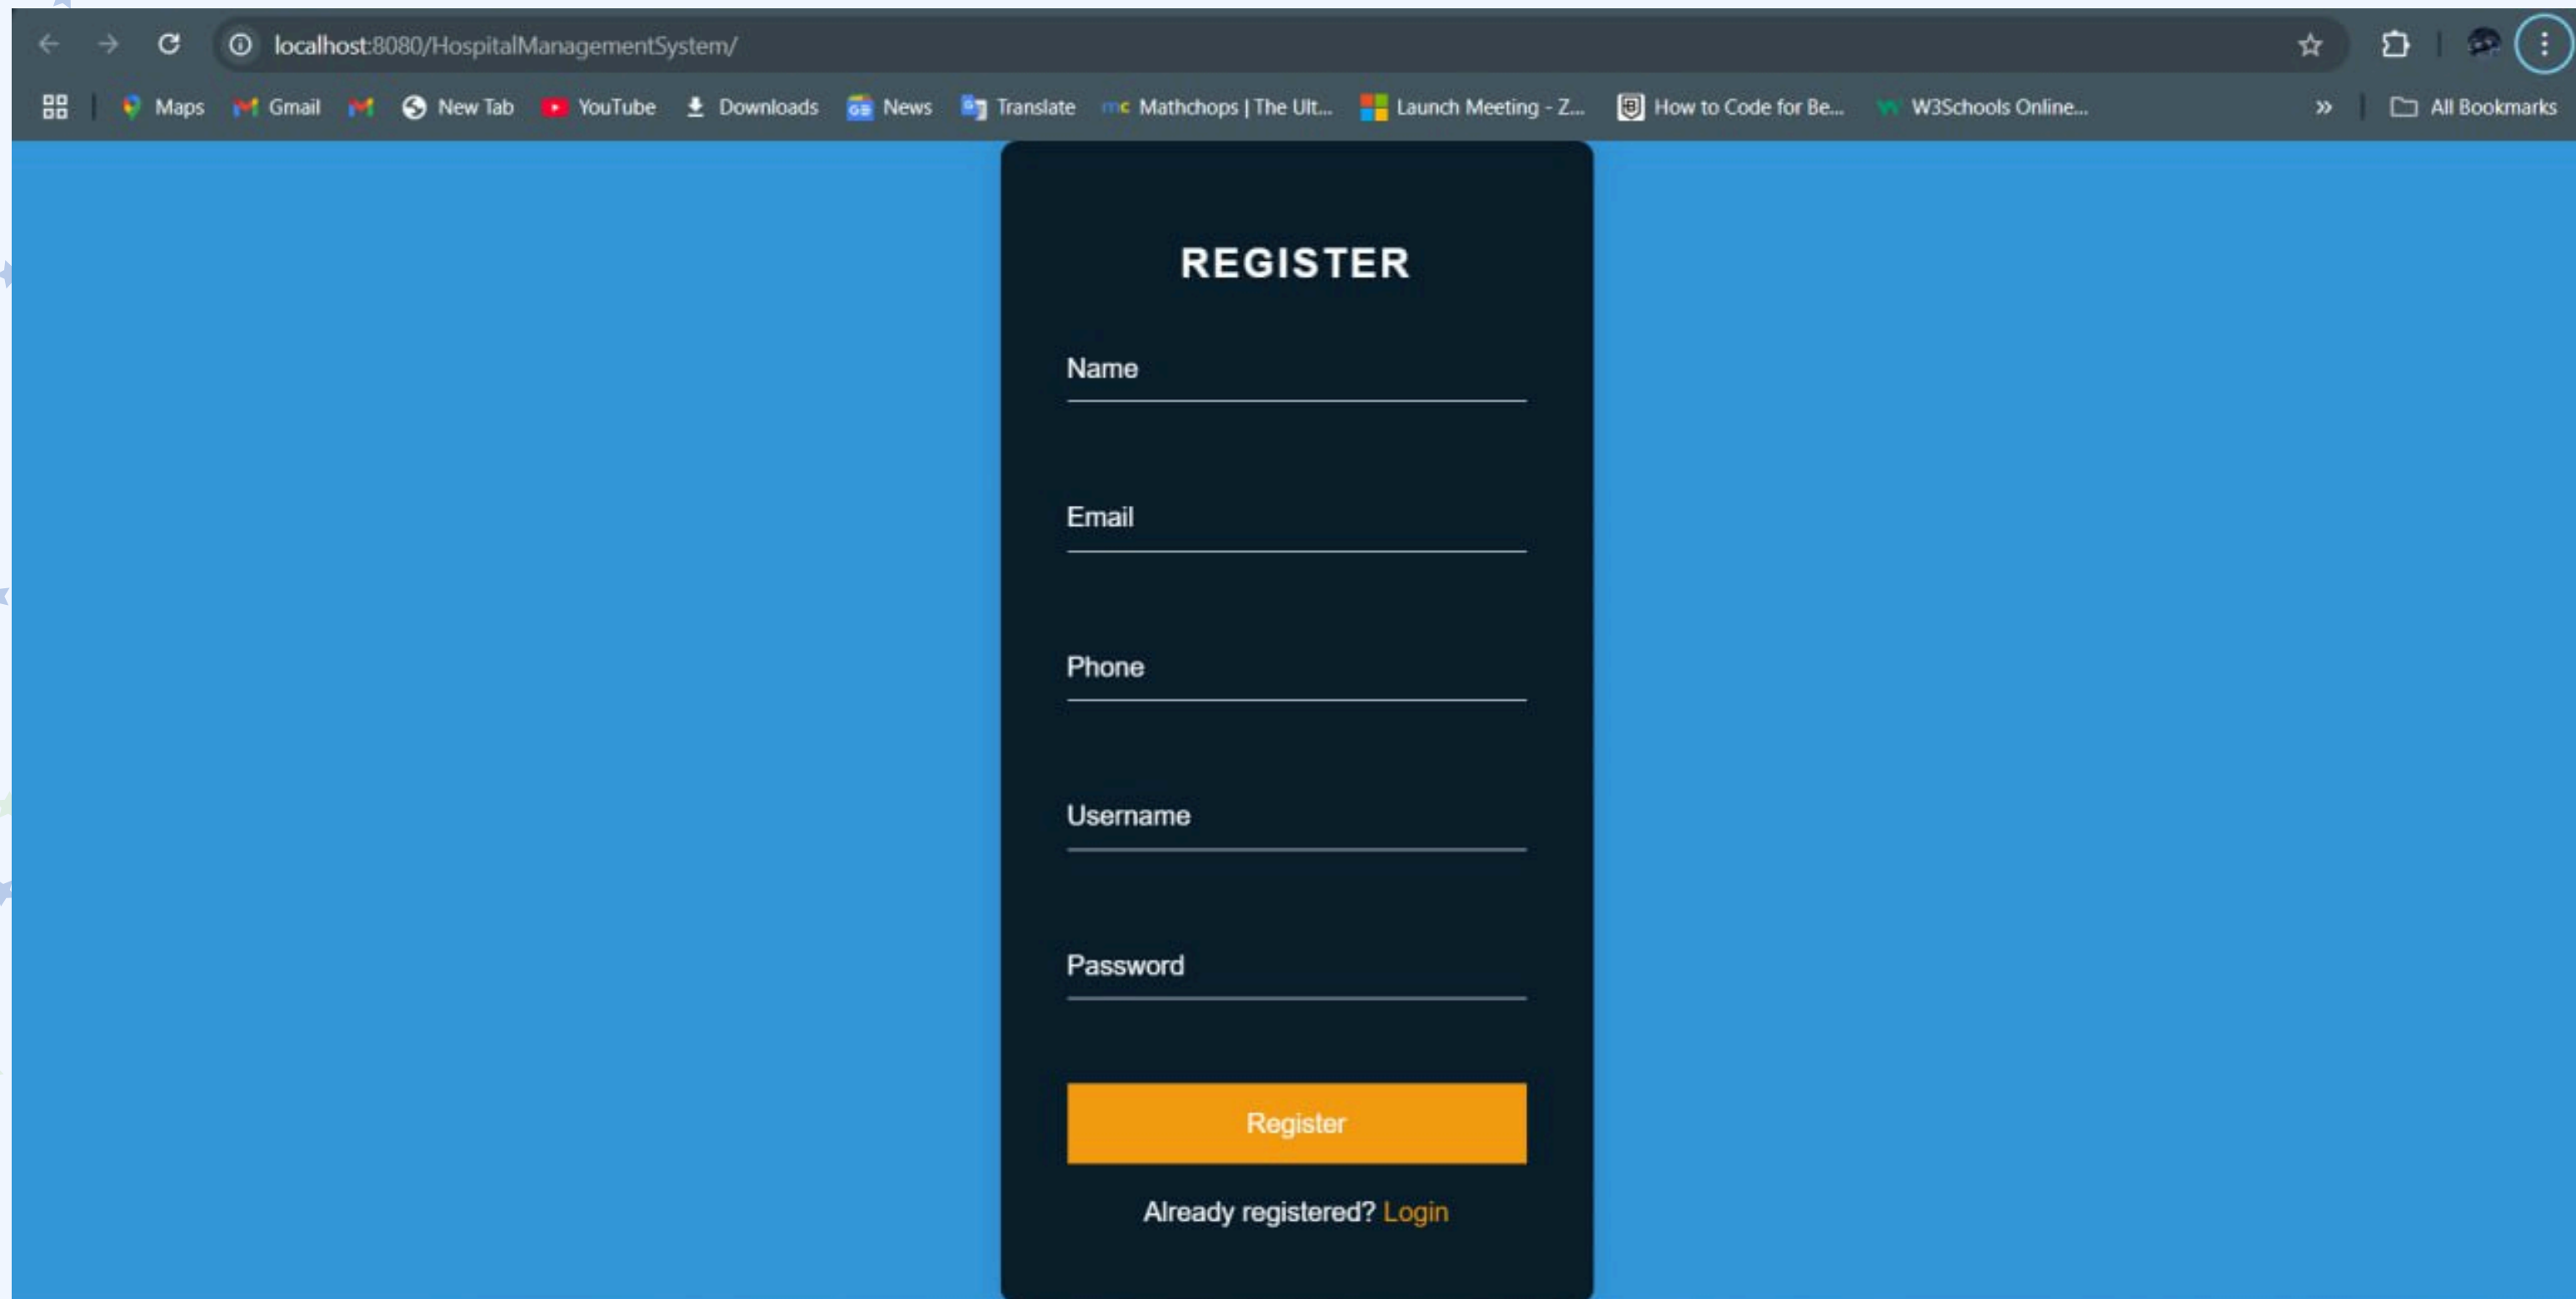

5. HTML & CSS for Frontend

- HTML for the user interface.
- CSS for styling.
- html
- CopyEdit
- ```
<h1>Welcome to Hospital Management System</h1><p>Click
below to view patient details:</p>View
Patient
```
- CSS for page styling:
- css
- CopyEdit
- ```
body { font-family: Arial, sans-serif; background-color: #f4f4f4; }  
h1 { color: #333; }
```

6. Deploy and Test

- Run the project on Apache Tomcat.
- Test data retrieval from MongoDB and ensure proper front-end display.
